Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Walt Linder on October 17, 2005.

Claim 1:

(Currently amended) A method for generating training data that can be used with statistical models to normalize abbreviations in text, including:

providing a corpus of text including expansions of the abbreviations to be normalized;
processing the corpus of text to identify the expansions in the corpus of text;
processing the corpus of text to generate context information describing the context of the text in which the expansions were identified; and

storing training data as a function of the generated context information, the stored training data including a set of feature vectors where each feature vector includes the abbreviation, associated expansion and the context information generated for the associated expansion identified in the corpus of text.

Drawing Corrections

Formal drawings are required to replace the hand sketches in all figures which were originally submitted. The drawings must be submitted in response to this action.

Reasons for Allowance

Claims 1-7, 9 and 11-12 are pending. Only claim 1 is independent. The closest prior art is Taira (U.S. Pre-Grant Publication US2003/0105638). Claim 1 was amended in the amendment of 9/22/05 to define training data including a set of feature vectors where each feature vector includes the abbreviation, associated expansion and context information generated for the associated expansion identified in the corpus of text. This feature is not in Taira. Claim 1 has been further amended by examiner's amendment to further recite "the stored training data for purposes of clarity in the claim. It is also noted that the method of claims 1-7, 9 and 11-12 are understood to be an automated method (Summary of the Invention, line 1).
